**2021-22**

<b>Lab Number:</b>	<b>3</b>
<b>Student Name:</b>	<b>Pooja Jagdish Verma</b>
<b>Roll No :</b>	<b>21</b>

**Title:**

3.1 Write a C++ program for Basic bank Management System

3.2 Write a C++ program to Create a class Student with two method getData() and printData(). getData() to get the value from the user and display the data in printData().

Create the two objects s1 ,s2 to declare and access the values from class StudentTest.

**Learning Objective:**

- Students will be able to write C++ program for using classes and objects.

**Learning Outcome:**

- Ability to execute a simple C++ program by accepting and displaying values using Functions
- Understanding the classes and objects concept in C++.

**Course Outcome:**

<b>ECL304.1</b>	Understand object-oriented programming concepts and implement using C++ and Java
-----------------	--

**Theory: 1. Difference between procedural and object oriented language:**

**Procedural programming:-** uses a list of instructions to tell the computer what to do step-by-step. Procedural programming relies on - you guessed it - procedures, also known as routines or subroutines. A procedure contains a series of computational steps to be carried out. Procedural programming is also referred to as imperative programming. Procedural programming languages are also known as top-down languages.

**Object-oriented programming, or OOP,:-** is an approach to problem-solving where all

**Faculty: Ms. Deepali Kayande**

**2021-22**

computations are carried out using objects. An object is a component of a program that knows how to perform certain actions and how to interact with other elements of the program. Objects are the basic units of object-oriented programming

**2. Application of object orientation:**

- User interface design such as windows, menu.
- Real Time Systems
- Simulation and Modeling
- Object oriented databases
- AI and Expert System
- Neural Networks and parallel programming
- Decision support and office automation systems etc.

**3. Brief introduction to C++:**

C++ (pronounced "see plus plus") is a programming language began as an expanded version of C. The C++ were first invented by Bjarne Stroustrup in 1979 at Bell Laboratories in Murray Hill, New Jersey. Bjarne Stroustrup initially called the new language "C with Classes." However, in 1983 the name was changed to C++. C++ is a middle-level programming language. C++ is a statically typed, compiled, general purpose, case -sensitive, free-form programming language that supports procedural, object-oriented, and generic programming.

<b><u>Algorithm :</u></b>	<ol style="list-style-type: none"><li>1. Start</li><li>2. Define Class BankLab 2</li><li>3. Define attributes – Name , account_type , account_number, amount, balance</li><li>4. Declare attributes by using constructor of class.</li><li>5. Define and declare method – deposit() to deposit the</li></ol>
